

Conveying at its best

PROCESS IMPROVEMENTS ARE THE INSPIRATION BEHIND HABASIT'S BELIEF IN MANUFACTURING BELTS AND SETTING THE STANDARD FOR QUALITY AND INNOVATION

+ Founded in 1946, Habasit has cared for the special and individual needs of their customers for over 60 years. Their outstanding record has made the company a world leader in innovative solutions, process improvement, service and support. To secure a competitive edge, companies within the bakery industry have to fully embrace new innovative technologies to improve their productivity and prevent unexpected production stops.

Almost every application needs a specially designed belt

In the baking industry, every kind of application and process e.g. moulding, sheeting, depositing, cutting, folding etc., and of course transport/transfer of proofed, baked and frozen products need adequate conveying solutions.

Conveyor belts are one of the key elements in food processing systems. Swiss world leader, Habasit offers a broad range of belting products including comprehensive services. The product portfolio includes fabric-based conveyor belts, plastic modular belts and chains, power transmission belts, timing belts as well as gear motors.

HabasitLINK® Micropitch – The latest plastic modular belting achievement

The Habasit Group recently presented the plastic modular belt with the smallest pitch ever seen in the industry. The brand new Micropitch M0870 Flat Top is a unique new plastic modular belt,

specially designed for the tightest and smoothest transfers to ensure stability of delicate and small products, such as biscuits, flash-frozen cookies, croissants and petit fours, processed dough and all sorts of small confectionery.

One example is shown for the minimum nosebar diameter of 7mm, where the distance between the nosebars is only 15mm, eliminating the need for deadplates for most products. Due to the design of the Micropitch, the vertical displacement is very low; as a result transfers are smoother, minimizing product damage. The Micropitch will be commercially available in the second quarter of 2008. +++

The World's Leader in Bread Slicing for over 75 years.

- BREAD AND BUN BLADES
- LATTICE AND GUIDES
- AUTOMATIC HONES

- RECIPROCATING BLADES
