

++ AUTOMATIC CHECK WEIGHERS

Liebel Weighing and Grading Technologies, Ottensoos, Germany, is known as a manufacturer of automatic weighing systems. They include

- + automatic check weighers for dough pieces
- + automatic check weighers for cut bread
- + automatic check weighers for pans and baking moulds (whole grain bread or cakes)

The main goal for using these systems is to optimize filling quantities. The check weigher together with dough divider, dough filler or cutting machine forms a control loop for automatic control of the portioning process. Deviations from the mean value can be continuously adjusted. Furthermore, under- or overweight products can be automatically discharged. The third option includes a complete acquisition of statistical data and their evaluation.

++ A NEW SERIES OF LAMPS

BÄRO, Leichlingen, Germany, has responded to the demand for consistent interior design by creating a new BÄRO series of design fixtures. With this new range, the company has succeeded in creating a consistent design for different types of fixtures. This is a real boon for retailers because state-of-the-art lighting technology is combined with an elegant, sophisticated design. Recessed fixtures, fixture units and suspended fixtures are now available with an attractive, consistent aesthetic concept. The Pendo suspended fixture for example has a range of components that allow it to be set up in a host of different ways: Fit it with no lampshade to enjoy technical lighting au naturel, or use the S (small) or L (large) shade to create fascinating decorative and lighting effects. A filter will protect the illuminated food and prevent sweating or melting of cakes or cream gateaux.

++ EASYLIFT TAKES OVER

The new Easylift built by Bear, Brøndby, Denmark, takes over when it comes to heavy labor, for example when the bowl filled with raw materials needs to be moved into the machine. The integrated electrical lifting device makes sure that the employees do not have to lift or carry the bowl in order to fill it with raw materials. The Easylift is capable of lifting up bowls with a weight of up to 100 kg. The integrated, acid-free battery ensures that the Easylift is always ready for work. Easylift is available as Type 60 for bowl sizes 30-60 l and Type 140 for bowls with a capacity of 80-140 l.

++ IFS AND RELIABLE TRACEABILITY WITH CABTOOL

The bakery "LEO – Der Bäcker und Konditor" located in Aachen, Germany, has been optimizing production and logistics of their range of baked products, confectioneries and snacks with the supply chain solution of ToolBox Software GmbH, Eschweiler, Germany. Important requirements of the IFS (International Food Standard) and traceability requirements are fulfilled in a safe and transparent manner. The product management system cabTool controls the complete material and information flow in the production. The daily production of baked products is carried out efficiently, smoothly, transparently and safely. Starting with raw materials received, cabTool takes over the complete data logging. Hand-held devices are used to read complex data from all production steps via EAN codes in a practical and structured way. In the production area of the Aachen bakery components, scales and thermometers are connected to cabTool. 12 industrial touch screen PCs – located at important stations between incoming goods and dispatch – which enable the company to collect and analyze all production process data.
